

Overview of Architectural Components

Praveenkumar Bouna, CodeWithPraveen.com

**Architectural
components:** Building
blocks that make up the
Azure platform

Types of Core Architectural Components

Physical Infrastructure

Management Infrastructure

Physical Infrastructure

- Datacenters
- Regions
- Region Pairs
- Sovereign Regions
- Availability Zones

Management Infrastructure

- Resources
- Resource Groups
- Subscriptions
- Management Groups

Azure Regions and Region Pairs

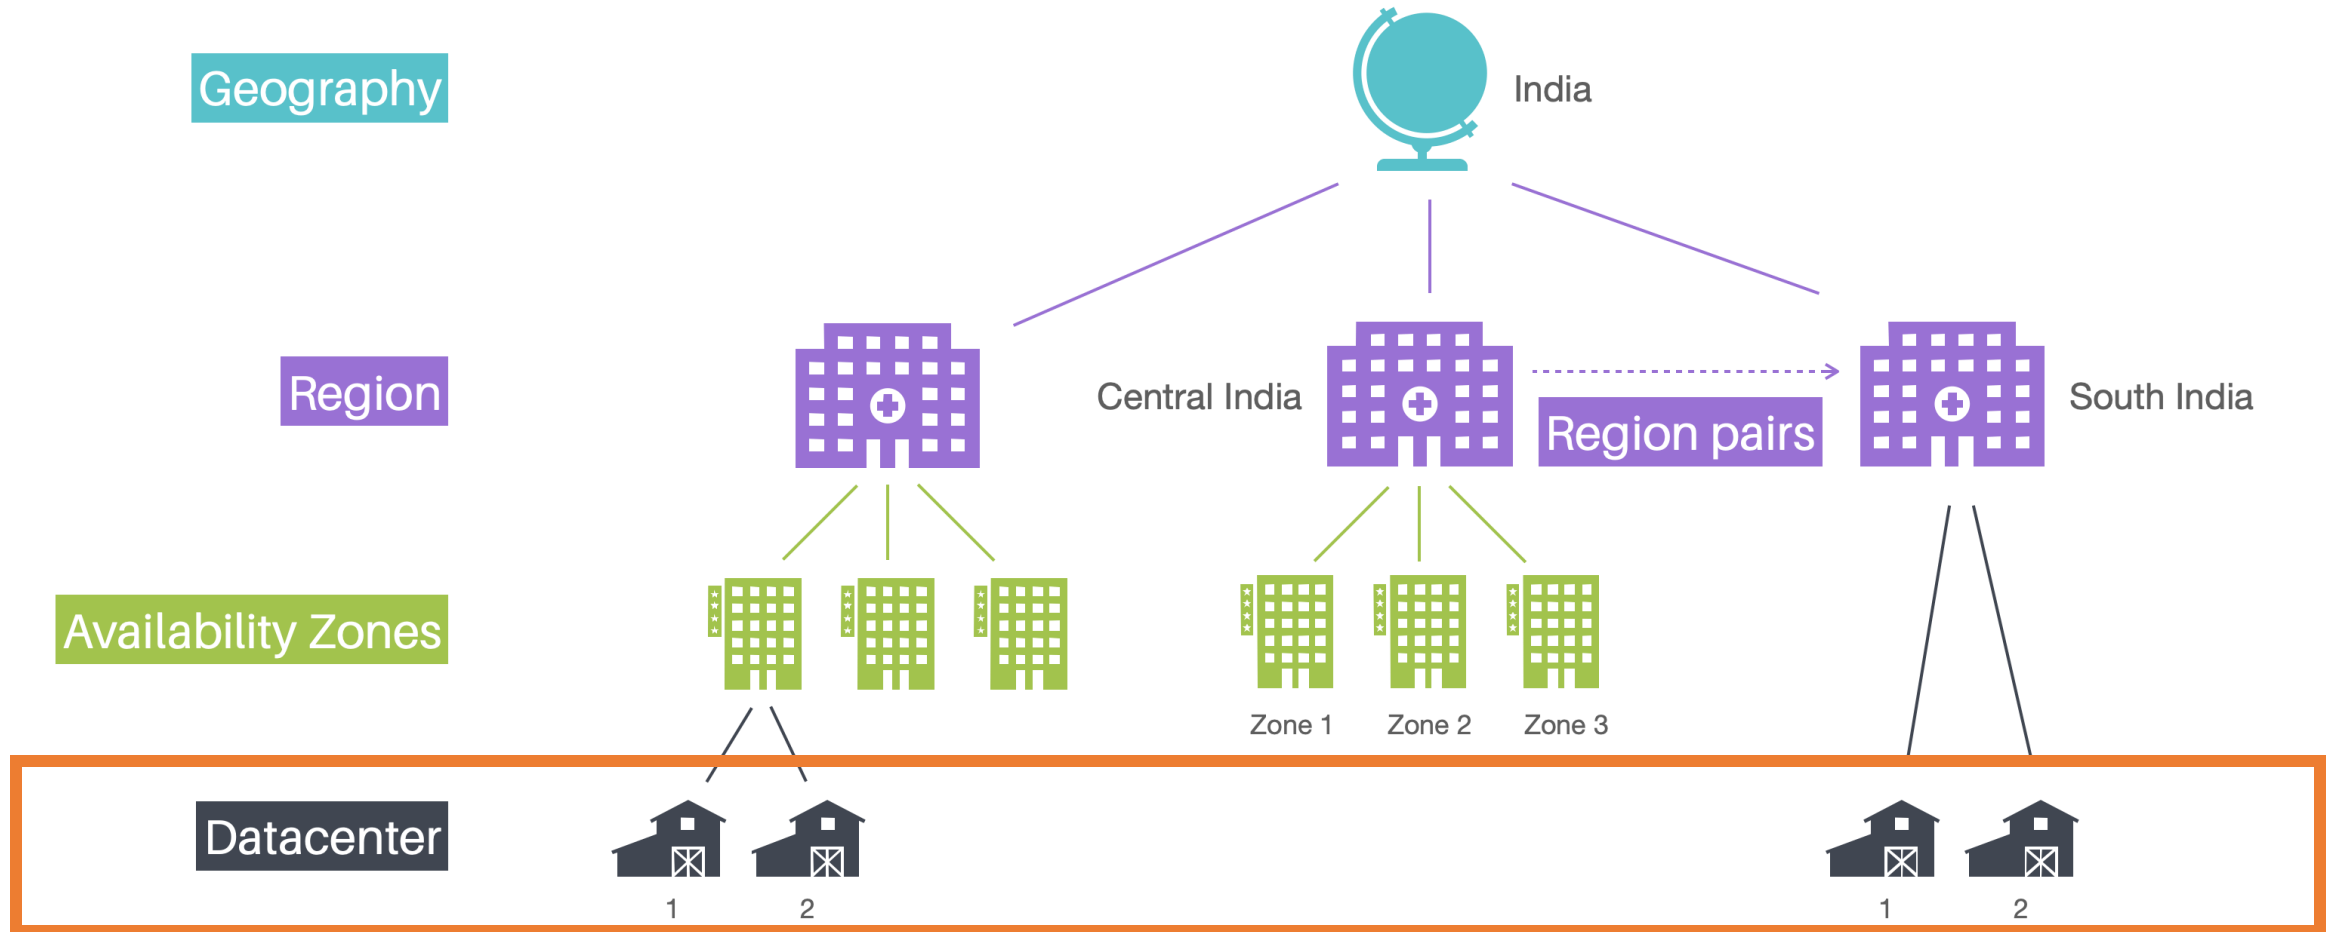

Praveenkumar Bouna, CodeWithPraveen.com

Datacenter

- Azure has multiple datacenters across the world
- Server racks with power, cooling & networking
- You can't directly access the datacenter

Azure Physical Infrastructure

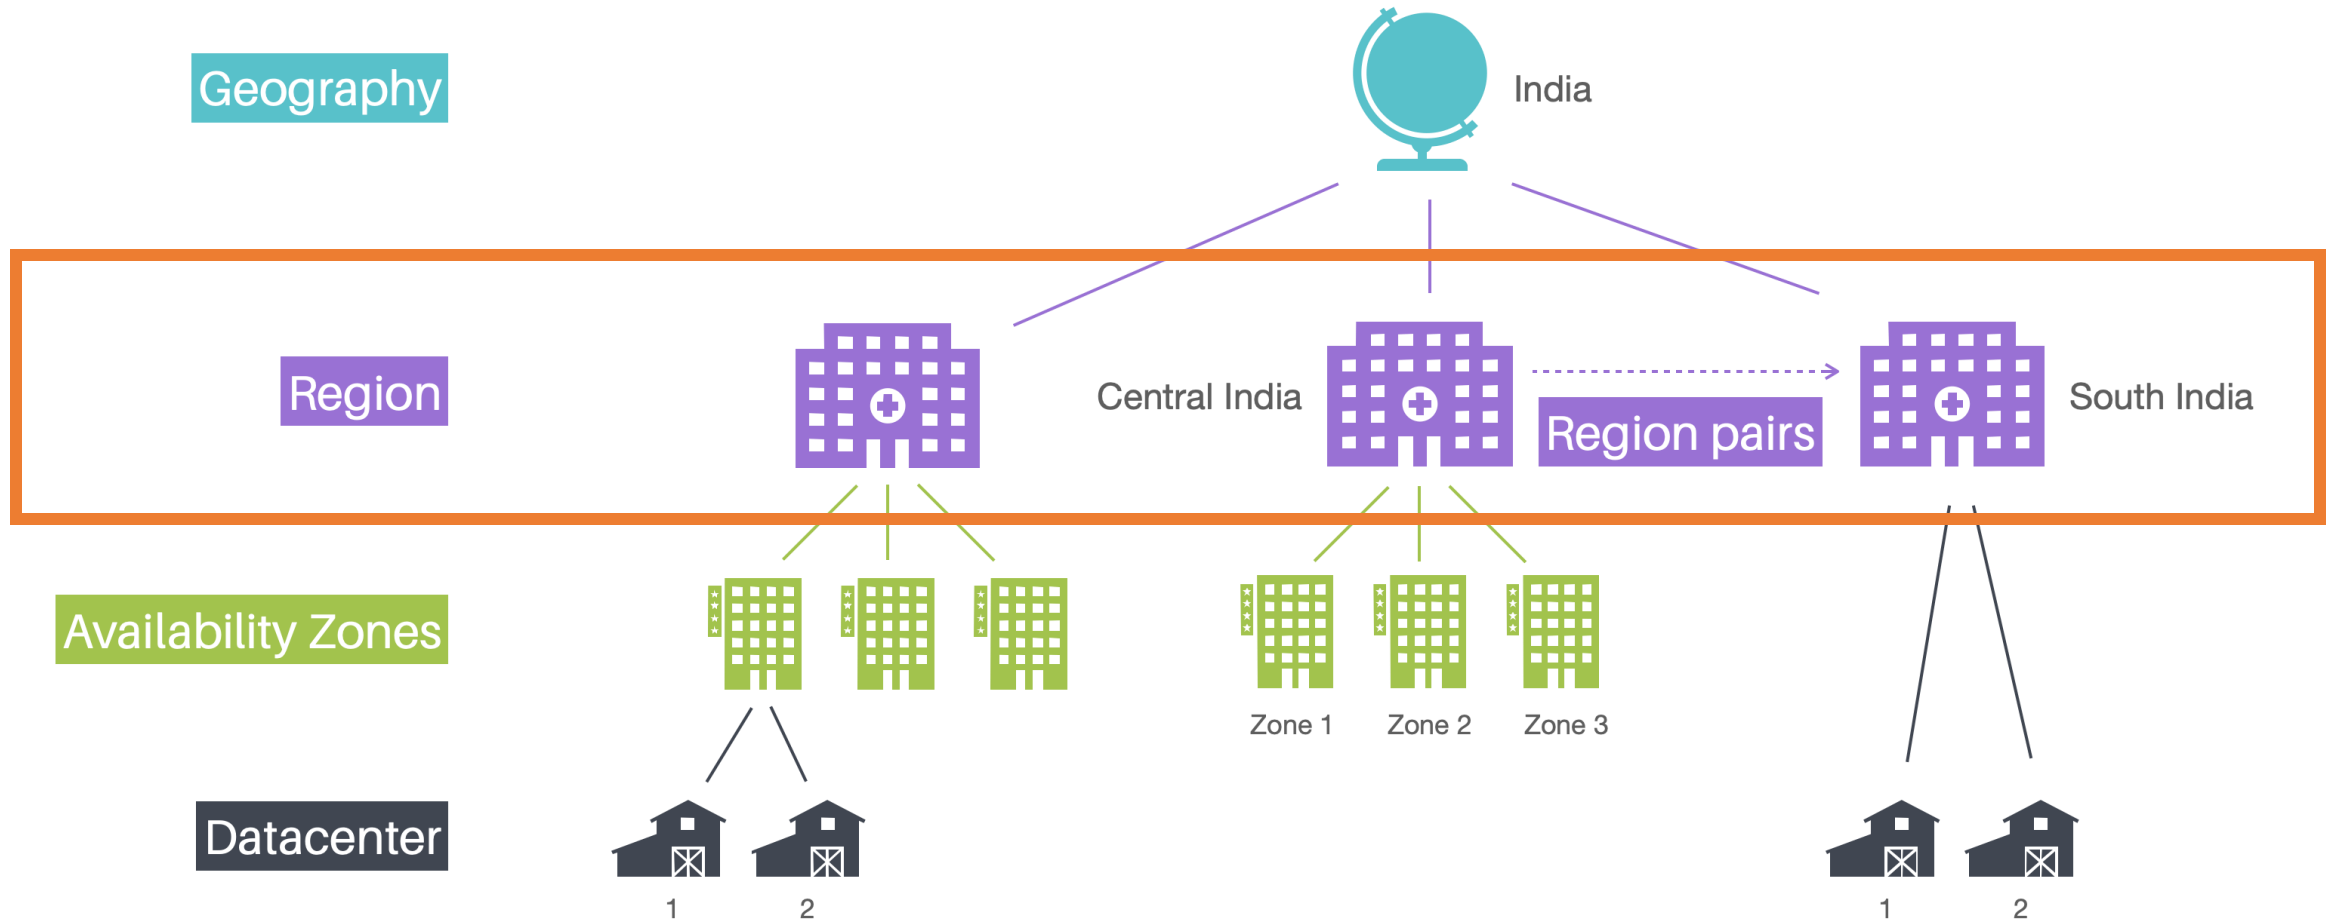

Region

- Geographical area with at least 1 datacenter
- You select region while creating a resource
- Certain Azure features are region specific

Azure Physical Infrastructure

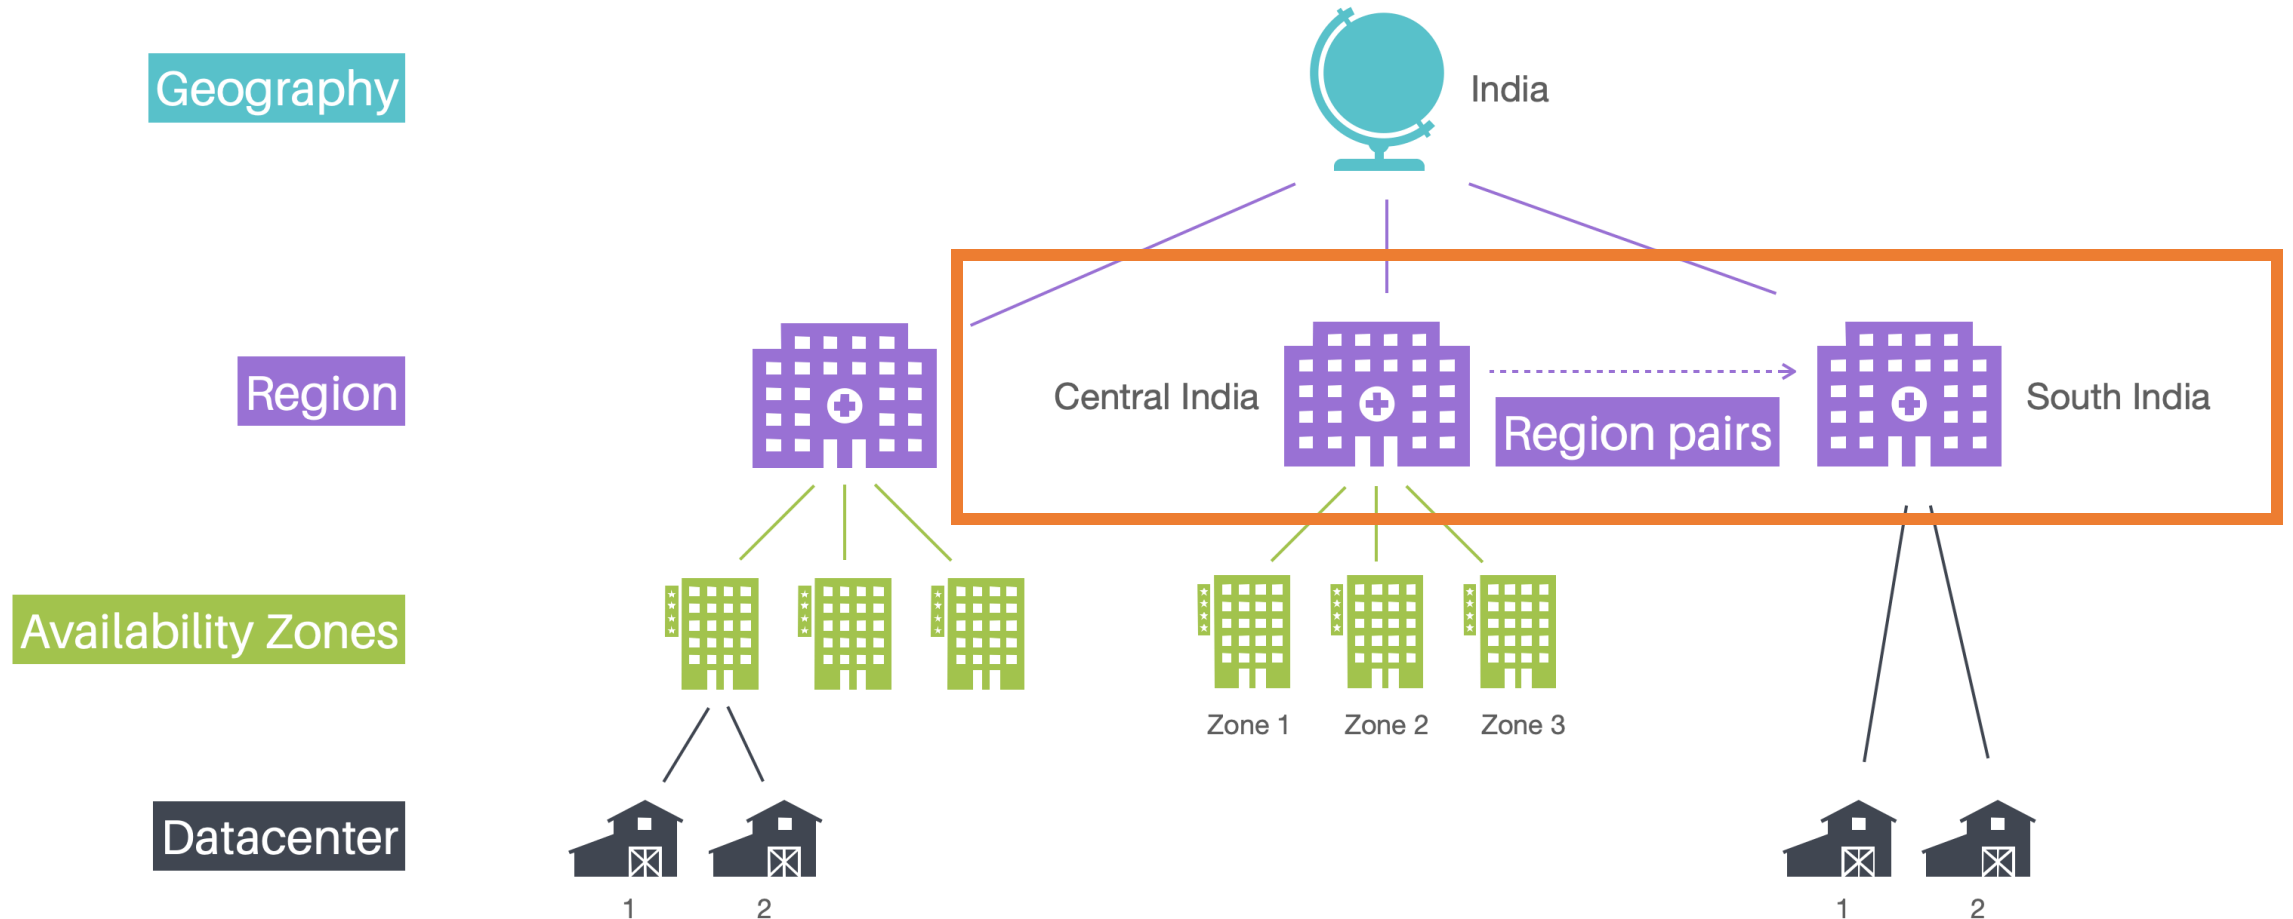

Region Pairs

- Region paired with another within same geography
- 300 miles apart
- Most regions are paired bi-directional; not all
- Purpose: Natural disasters, power outages, Azure outages, Azure updates

Azure Physical Infrastructure

Availability Zones

Praveenkumar Bouna, CodeWithPraveen.com

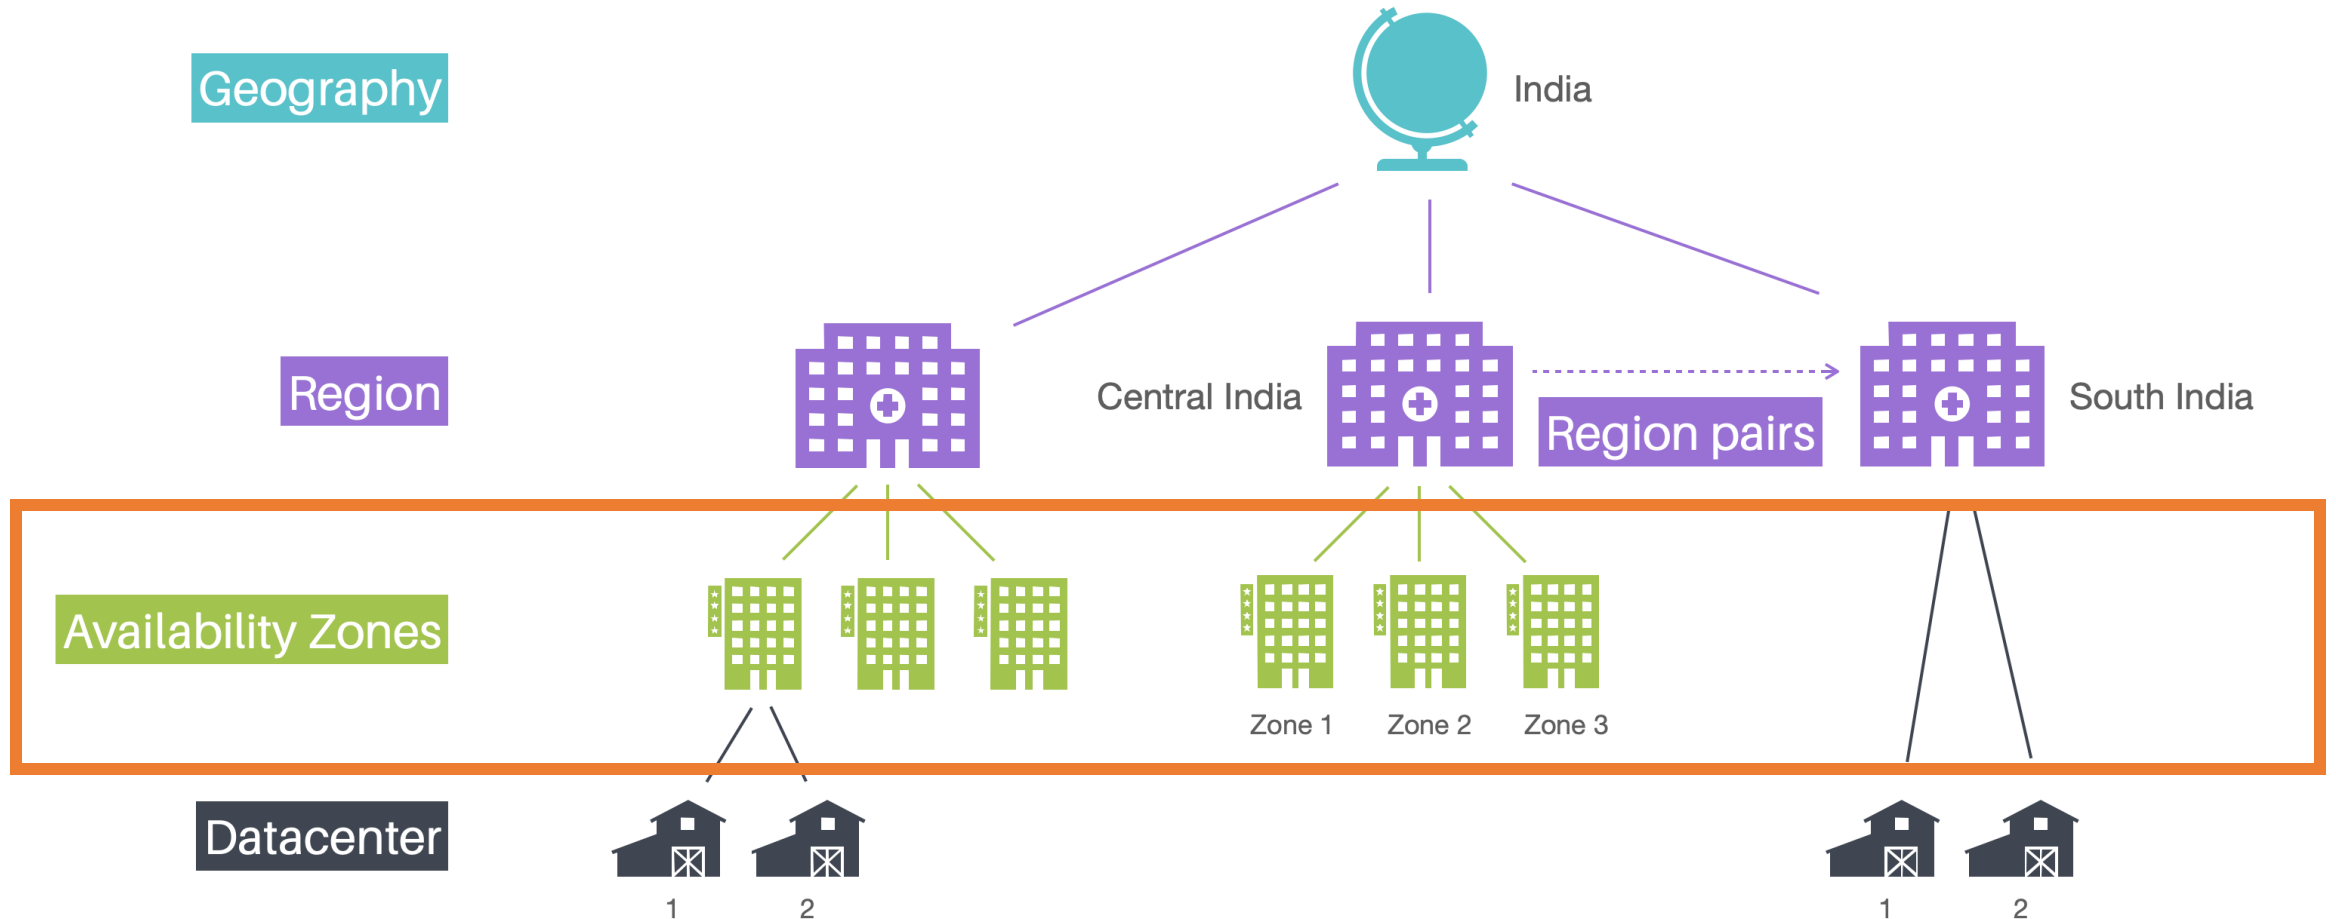

Availability Zones:

Physically separate datacenters in a region with independent power, cooling & networking

Availability Zones

- Connected with high-speed fiber-optics
- Minimum 3 availability zones
- Not all regions support availability zones
- Use cases: High-availability, Mission-critical applications

Azure Physical Infrastructure

Availability Zones

– Azure Services

- VMs
- Managed disks
- Load balancers
- SQL databases

Azure Sovereign Regions

Praveenkumar Bouna, CodeWithPraveen.com

Sovereign Regions:

Region that is isolated from the main Azure for compliance purposes

Azure Sovereign Regions

US DoD Central

US Gov Virginia

US Gov Iowa

China East

China North

Sovereign Region: China North

China North

Region

Location

Beijing

2

Data residency

A sovereign offering:
independent, dedicated
network within China

Azure Geography

Praveenkumar Bouna, CodeWithPraveen.com

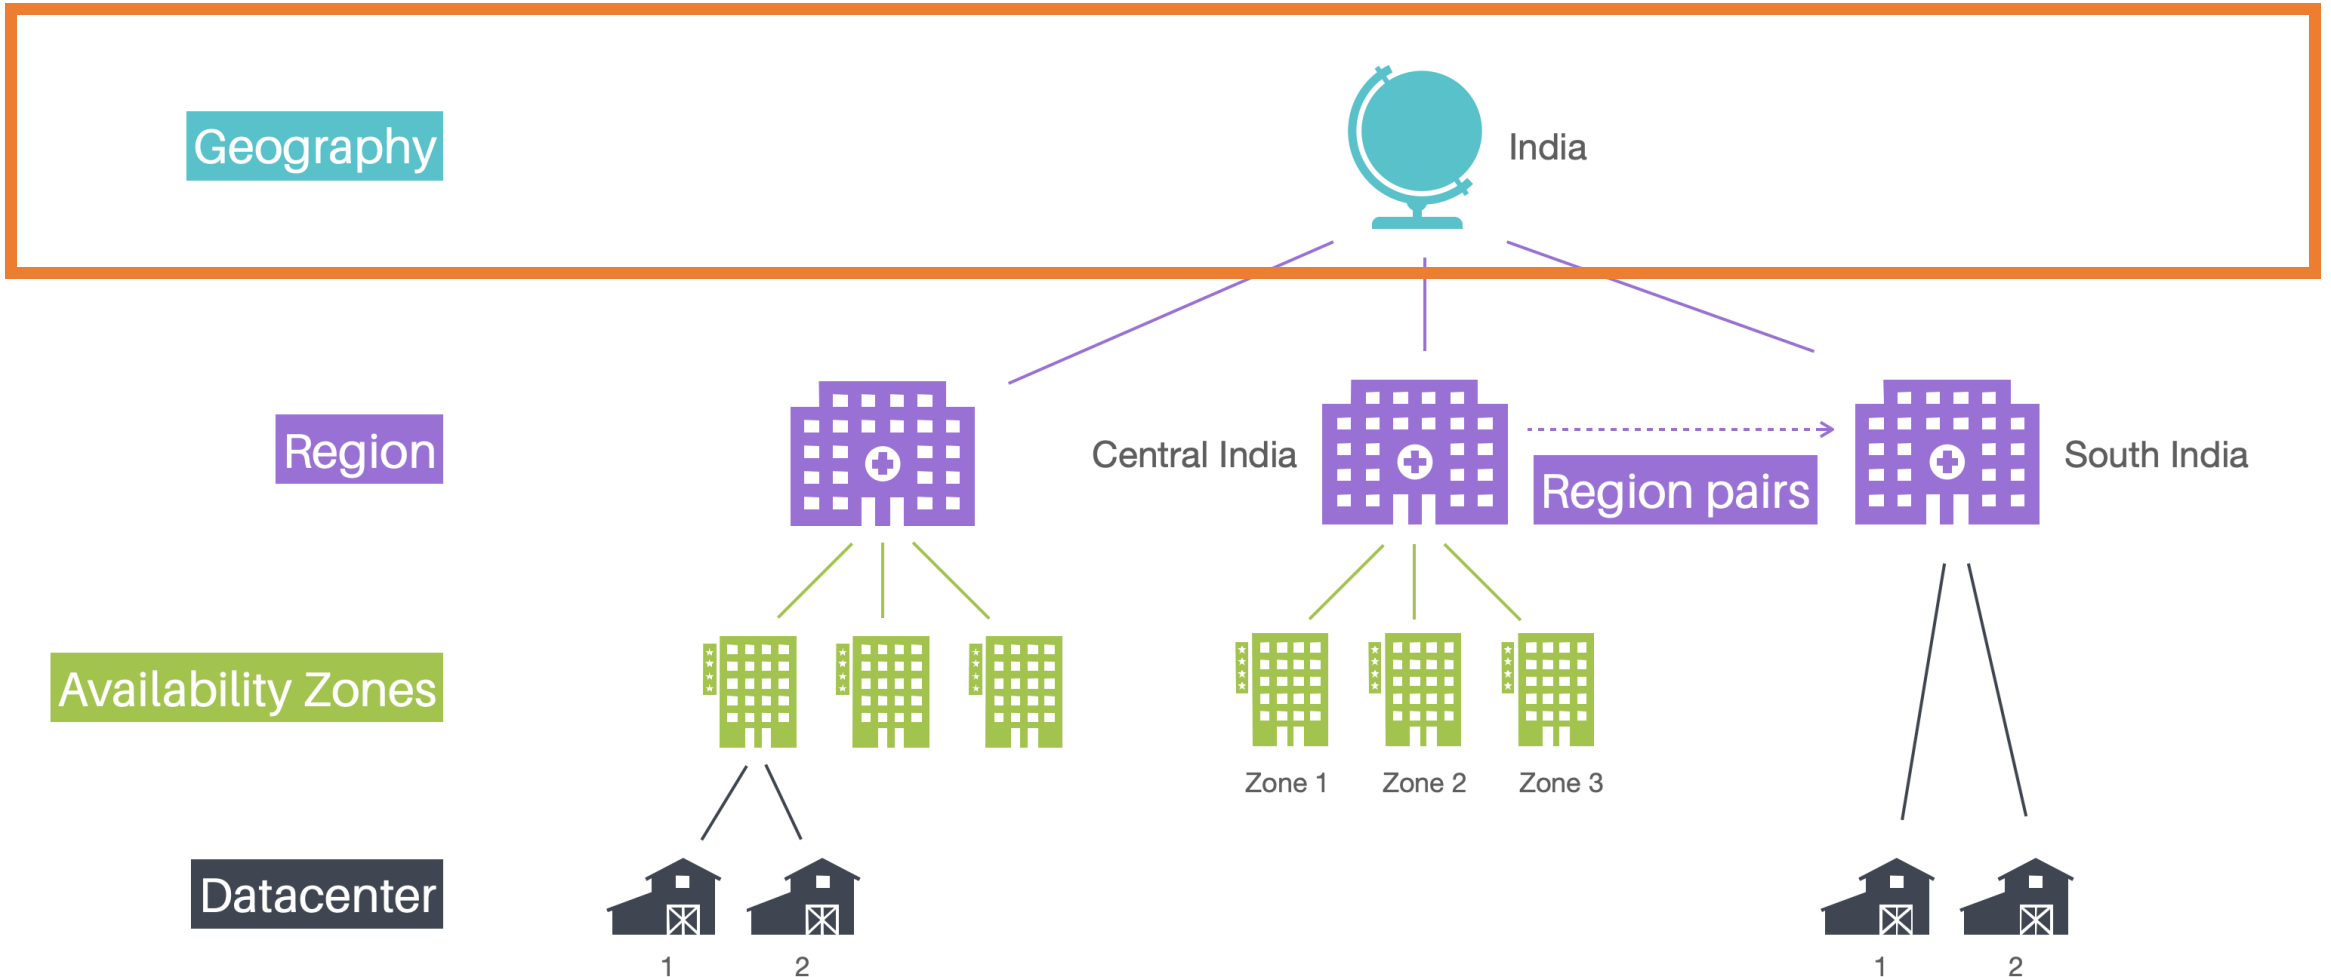

Geography:

Group of one or more regions that share the same physical location

Geography

- Compliance and data residency
- Service availability
- Pricing

Azure Physical Infrastructure

Geography: India

Resources and Resource Groups

Praveenkumar Bouna, CodeWithPraveen.com

Management Infrastructure

RESOURCES

RESOURCE
GROUPS

SUBSCRIPTIONS

MANAGEMENT
GROUPS

Resource:

The building block of
Azure

E.g., VM, virtual networks,
databases, storage
accounts, etc.

Azure Management Infrastructure

Resource Groups: A group of resources

Azure Management Infrastructure

Resource Groups

- Action applied to resource group applies to all its resources.
- A resource must be in a resource group.
- A resource group can contain many resources.
- Move resources between resource groups.

Resource Group: Typical Use Cases

Access control

Environment

Azure Subscriptions

Praveenkumar Bouna, CodeWithPraveen.com

Subscriptions: A unit of management, billing and scale, that logically organizes the resource groups.

Azure Management Infrastructure

Subscriptions

- A subscription is needed to use Azure services.
- Accounts refer to Azure Active Directory (Azure AD).

Subscriptions: Typical Use Cases

- Billing boundary
- Access control boundary
- Environment

Management Groups

Praveenkumar Bouna, CodeWithPraveen.com

Management Group: A
group of subscriptions

Azure Management Infrastructure

Management Group

Subscription

Resource Group

Resource

Management Groups

- Useful when you have multiple subscriptions.
- You can create a hierarchy of management groups; up to 6 levels excluding root level.
- Single directory can have max 10000 management groups.
- It can have only 1 parent.

Management Groups: Typical Use Cases

Access control.

Governance
conditions.
