

Azure Virtual Machines

Praveenkumar Bouna, CodeWithPraveen.com

Azure VM

- Create VMs in the cloud
- No need to maintain physical hardware
- Building block of IaaS
- Different types of base images available

When to Use Azure VM?

- You need more control
- You want to run custom software
- Migrate from on-prem to cloud

Scaling VMs in Azure

Virtual Machine Scale Sets

Virtual Machine
Availability Sets

Virtual Machine Scale Sets

- Group of identical VMs
- Load balance the VMs
- Central management
- Auto scale based on demand

Virtual Machine Availability Sets

- Enables highly available VMs
- Handles network & power failures
- No additional cost

Ways of Grouping VMs

Update domain

- VMs can be rebooted at same time
- During update, only 1 group will be offline

Fault domain

- VMs have common power and network
- 3 fault domains by default

Uses of Azure VM

TESTING &
DEVELOPMENT

LIFT-AND-SHIFT
OPERATIONS

SCALE APPLICATIONS
DURING DEMAND

SUPPORT HIGH-
AVAILABILITY

Azure Virtual Desktop

Praveenkumar Bouna, CodeWithPraveen.com

Azure Virtual Desktop

- Desktop & application virtualization on cloud
- Access Windows from any location or device

Security Features of Virtual Desktop

- Access using Azure AD
- Multifactor authentication
- Role-based access control

Support for Multi-session

Windows 10 or Windows
11 Enterprise

Concurrent usage

Azure Containers

Praveenkumar Bouna, CodeWithPraveen.com

Overview of Containers

- Virtualization environment
- Multiple containers in a single machine
- Lightweight and starts quickly
- Docker – popular container solution

Virtual Machines vs. Containers

VMs manage the OS, while containers do not

Containers are light and starts fast

VMs are constrained to a single OS

Azure Services for Containers

Azure Container App

Azure Container
Instance

Azure Kubernetes
Service (AKS)

Azure Functions

Praveenkumar Bouna, CodeWithPraveen.com

Overview of Azure Functions

- Serverless compute option
- Skip VM & container management
- Event-driven

Uses of Azure Functions

- Focus on code
- Faster execution
- Auto-scales
- Can be stateless or stateful (Durable Functions)

Azure App Service

Praveenkumar Bouna, CodeWithPraveen.com

Overview of Azure App Service

- Supports different types of apps
- Support for auto scale & high availability
- Supports multiple languages

Types of Apps in App Service

Web Apps

API Apps

Web Jobs

Mobile Apps

Benefits of App Service

Ease infrastructure
management

Support for scaling
and high availability

Geared for web
applications

Azure Virtual Networks

Praveenkumar Bouna, CodeWithPraveen.com

Overview of Azure Virtual Networks

- Aids communication between Azure resources
- Supports extending on-premise network
- Supports both public & private endpoints

Key Networking Capabilities

- Isolation and segmentation
- Communication between Azure resources & on-prem resources
- Route and filter network traffic
- Connect to virtual networks

Connectivity Options

Point-to-site
VPN

Site-to-site
VPN

Azure
ExpressRoute

Virtual Network Peering

Connect multiple
virtual networks

Works on Microsoft
backbone network
